

(1610)

Hr truly 5 Two small stars which were near to Jupiter are no longer discerned of which the
(diagram) constitution was such

(large grid)

(in Italian) one of the three of Orion's Belt

(diagram) Canis

Around Canis besides others
there are 7 stars in exactly similar configuration of which
the distant of the largest from Canis does not surpass 20 minutes.

(diagram) Canis Minor, I believe

Star A is not seen without the lens. However, seen with the lens it appears to
be of so great a size that the others are seen to be of 2nd, 3rd and 4th
magnitude less than it.
